TheOneApp Publisher

Evidence for the YouTube API Services compliance audit · Google Cloud project 780560926873 · 12 October 2026

What the API client is. TheOneApp Publisher is a private command-line tool used by one person, the teacher who runs TheOneApp (theoneapp-sg.vercel.app), to publish the teacher's own educational science videos to the teacher's own YouTube channel, TheOneApp. It has no other users and no user accounts.

Endpoints used

Endpoint	Why
channels.list (mine=true)	Find the signed-in owner's channel and its uploads playlist
playlistItems.list	Find each uploaded episode on the owner's channel
videos.insert	Upload a finished episode (once the project is audited)
videos.list, videos.update	Set title, description, tags, category, language, made-for-kids, visibility
thumbnails.set	Upload the episode's custom thumbnail
playlists.list, playlists.insert, playlistItems.insert	Keep every episode in the series playlist "TheOneApp, Explained"

What is in this document

1. OAuth flow: how the owner signs in (Google device-code flow), the scope requested, and how access is revoked.
2. Upload interface: the tool's dry run and its publishing run, as recorded on 11 October 2026.
3. Player / embed: where the published videos appear in TheOneApp.

Links referred to in the privacy policy and terms: Privacy Policy · Terms of Service · YouTube Terms of Service · Google Privacy Policy · Revoke access.

1. OAuth flow

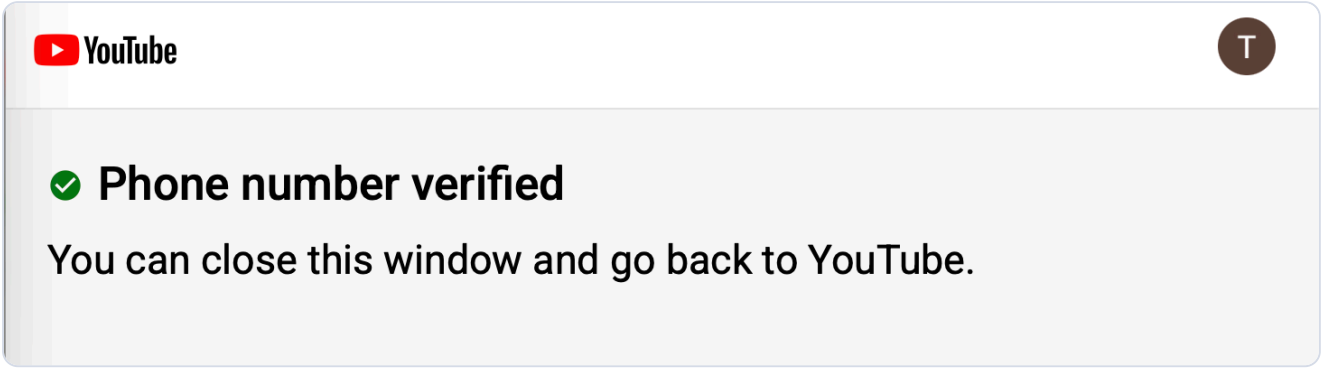

The tool uses Google's OAuth 2.0 **device-code flow** (OAuth client type "TVs and Limited Input devices"). It requests one scope, `https://www.googleapis.com/auth/youtube`, which is needed to upload and edit the owner's own videos and playlists. Nothing is read from any other account.

Step 1 · the tool asks for sign-in

```
$ python3 production/youtube/yt_device_login.py start
Open this link in your browser:  https://www.google.com/device
Enter this code:                 SYL-HFH-VTNT
The code is valid for 30 minutes. Then run:  python3 yt_device_login.py wait
```

Step 2 · Google's consent screen

The owner opens google.com/device, enters the code, chooses the channel's Google account, and sees the standard Google consent screen for "TheOneApp Publisher" listing the YouTube permission. After approval Google shows "Success! Device connected". The screens below are the ones the channel owner saw on 11 October 2026.

Step 3 · the tool receives the token

```
$ python3 production/youtube/yt_device_login.py wait
Waiting for your approval in the browser…
Tokens stored in production/youtube/.yt_token.json (refresh token: yes)
```

The token file is readable by the owner only (mode 600), is excluded from version control, and lives only in the owner's private workspace. The tool never prints a token.

Revocation

The owner revokes the tool's access at any time at security.google.com/settings/security/permissions ("Third-party apps with account access" → TheOneApp Publisher → Remove access). The stored token then stops working. The privacy policy and terms both state this.

2. Upload interface

The tool has no graphical interface; it is run from a terminal by the owner. It always offers a **dry run** that lists what it would change before anything is written. Below are the real runs from 11 October 2026, when episodes 1 to 5 of the series were published.

Dry run

```
$ python3 production/youtube/publish_p4.py --from 1 --to 5 --dry-run
Channel: TheOneApp (UCu8usghTv_5K0FuJykeCGKg)
Playlist 'TheOneApp, Explained': would create

```

Every video is marked "made for kids" because the audience is 9 to 12 years old. The videos were uploaded by the owner in YouTube Studio; the tool will use videos.insert for later episodes once the project is audited.

3. Player / embed

The published videos appear on the Videos page of TheOneApp, played through YouTube's privacy-enhanced embedded player (youtube-nocookie.com, with the standard YouTube controls and branding). The page states that the lessons play from the YouTube channel; its footer links the channel, the privacy policy and the terms. Episodes 1 to 5 are "Now showing"; the rest are "Coming soon" until published.
